

It's a big country.

Drive a truck that gives you plenty of space.

First-class style combined with economical operation.

Above all else, a truck should deliver profits. The 70" Mack® Vision™ model comes through every time. It keeps fleet managers happy by minimizing unexpected downtime and improving ease of service. Drivers will love it because of its sleek, aerodynamic styling and roomy interior. The engine is designed to sip fuel and still pour on mighty power. Next-generation electronics give you the information you need to run productively. You'll be hard pressed to find another highway truck that delivers so much.

Fight driver fatigue with a cab.

Mack makes the toughest trucks on the planet. But when drivers step inside of our cab, they experience a plush, softer side. The adjustable driver seat is designed to cradle and cushion, to absorb the impact of the road. The gauges are easy to read and feature colors that reduce eyestrain. All switches and controls are in easy reach. No unnecessary stretching. Visibility is enhanced with a sloped hood that lets drivers see more of the road and work confidently.

Wall-to-wall comfort for coast-to-coast driving.

The 70" high-rise sleeper is packed with amenities that make life on the road easier. There's more than enough headroom. Drivers will find plenty of storage with tall closets for coats and shirts. The bunk — featuring a full, innerspring mattress — lifts up for additional storage. A TV shelf and refrigerator cabinet are standard. Strategically placed lighting helps with working, reading or relaxing.

A chassis that delivers productivity.

The Vision runs on the Advantage™ chassis, specially designed by Mack for highway use. Improved maneuverability has outside wheel cuts up to 50 degrees. Color-coded lines with push-to-connect fittings for easy service. Driver comfort is improved thanks to the use of vibration dampening materials and noise reduction engineering. Improved ride and handling promote increased driver satisfaction.

Our frame's motto: travel light.

The Advantage chassis gives you four frame rail options to choose from. Its increased strength may allow you to match a lighter frame to your application for greater weight savings.
