

Mack Bulldog Ornament Color Designations

- 1941 - December 1941 thru September 1944 the chrome finish was replaced by Mack Gray 775R, a painted finish.

- 1967 - Starting for the 1967 model year, the original "gold" ornaments signified that a vehicle featured the Mack Maxidyne engine and Maxitorque transmission. Mack trucks with other components used the chrome plated ornaments.

- 1980 - The engine color was changed to Andes Copper thus, the Maxidyne gold bulldogs were no longer used. During the month of March, the gold bulldog changed to silver across our product line. (SED#757-80)

- 1992 - Starting with the introduction of the CL model in the 1992 model year, CL models with the Elite trim packages utilized the gold ornament. The CH model with the Elite high-level interior trim package may also have included the gold ornament.

- 1995 - CH models for the 1995 model year with Pedigree Powertrain utilized the gold ornament. (SED#1122-94)

- 2000 - CX models with the Millennium Gold Package utilized a gold Bulldog with a gold base. (SED#1202-00)

- 2007 - Starting with the 2007 model year, the gold ornament indicated that a vehicle had an all-Mack powertrain, i.e., Mack engine, Mack transmission, and Mack axles. This is its current usage.

- 2019 - Starting in 2019, a copper ornament was added to signify electric power, starting with the Electric LR model.

- 2020 - Starting in 2020, a black ornament was added as a feature on the Limited Edition Mack Black Anthem model.

As Mack is a custom truck builder, there are more than likely a few exceptions.
