

Mack OTA/PTO Programming

We now offer OTA/PTO programming for Conventional Trucks (GR, AN, PI) VECU5 MY2022 and newer trucks.

We can set up PTO Engine Speed Control to meet your needs.

This will allow you to have your PTO parameters adjusted without taking your truck to the Dealer. You will work with your dealer to request OTA/PTO programming.

The Process

1. Contact your dealer with the VIN and detailed information for exactly how you want the PTO/Engine Speed Control to operate and discuss pricing.
2. The dealer will start an eService case with Body Builder Support Group.
3. The Body Builder Support Group will make the necessary changes, and the Dealer will inform you to follow the instruction using the Instrument Cluster to pull in the changes.
4. Please pull in the changes in a timely manner, test and verify that the programming works to your satisfaction.
5. Contact the Dealer and give your approval to close your transaction. Body Builder Support Group will finalize the request. Once the case is closed with the Dealer, any further changes are subject to additional charges.

Note: Pricing may vary from dealer to dealer so make sure you verify with the dealer you use.
