REMACK® ENGINES

Remanufactured for Mack. By Mack.

What will your truck be in its second life? A collection of aftermarket parts or still 100 percent Mack?

Mack's REMACK E6, E7 and MP Series Basic Engines combine the know-how of a Mack-trained technician with high-quality remanufactured and new parts. All the reliability you've learned to expect from Mack – straight from the source.

Add to that a two-year, unlimited-mile warranty, and you've got the peace of mind you need in something as important as your engine – and a few extra dollars still left in your pocket.

MackTrucks.com   **BORN READY.**

REMACK Engines

Remanufactured to deliver the way only Mack can.

REMACK engines are remanufactured under the eye and hand of a Mack-trained technician, and produced following stringent processes that include:

- Internal and external cleaning, and bead blasting to remove contaminants
- Electro-magnetic crack detection
- Pressure decay testing of the oil and coolant systems
- Vacuum testing of cylinder heads at intake and exhaust
- Complete replacement with new parts for all piston rings, liners, bearings, bushings and gaskets
- Multi-point detailed inspections

Mack is confident in our REMACK engines. So confident that we back them with a 100 percent parts warranty for two full years / unlimited miles. An optional three-year / 350,000-mile warranty is available when installed by an authorized Mack dealer and meets component program requirements.
